

**uArchive**

Archives old production data

*uArchive* provides ability to archive production data older than a pre-defined period thereby improving system performance. It is policy based and automated movement, that helps in protecting and securing information. It provides end-to-end archiving and retention solutions.

Recurring events such as periodical closes, and erratic events make certain information once again critically important. Back when capacities and connectivity were limited, the only choices for information were keep or delete. PeopleTech now gives organizations the tools to support a compelling middle ground environment, where a wide variety of information can be off loaded yet still accessible for fairly immediate use.

### Archive Strategy

- Retention/ Regulatory requirements
- Seamless access to archived data
- Reporting needs & time lines
- Cost to maintain archive solution
- Application upgrades
- Data integrity
- Size of database files

### Features

- PeopleSoft bolt-on application, uses Application Engine process, SQL loader
- Setup driven tool is to organize list of tables to be archived, frequency of archive process and target history database attributes
- Maintains archived data in separate schema

### Methodology

### Benefits

- The familiar web based interface is extremely easy to use
- Cost effective solution to maintain your history data
- Provides online access to archived data
- Improves production database system performance
