

uSQR

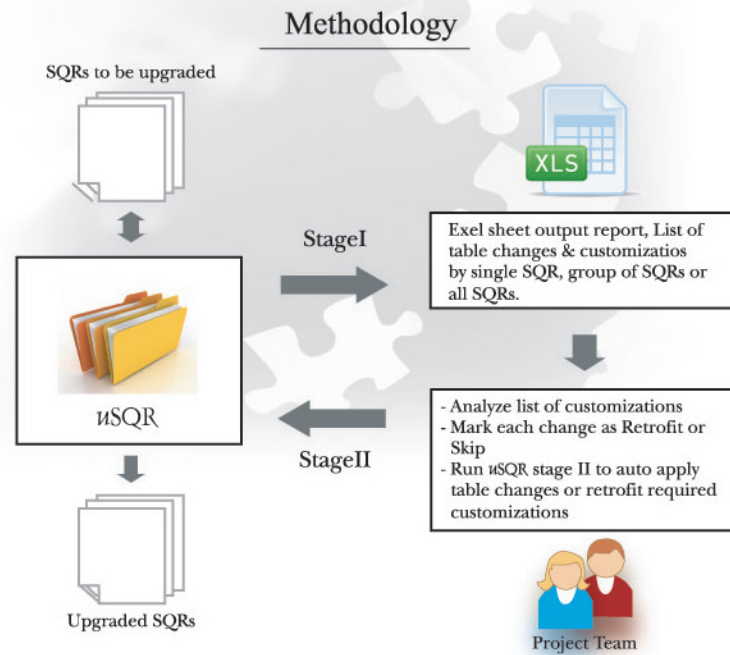

Analyzes and automatically upgrades table changes in an SQR.

It is an automated tool to identify and apply table structure changes in SQR reports. The two stage approach helps project team review the table changes before being applied.

Stage I – Identify changes

Stage II – Auto apply/Retrofit changes.

uSQR provides output in Excel format. Functional team can mark each customization as Retrofit or Skip before going for stage II. With uSQR, developers can identify and apply table changes on a particular SQR or group of SQRs by project or it can run on all SQRs under a specified folder.

uValidateIT

Validates PeopleSoft Environments.

This tool validates all aspects of newly created PeopleSoft instance. Ensures all PIA components like Application server, Web server, DB, Batch server and File servers are aligned with the new instance. It can compare DDDAUDIT, SYSAUDIT and UPGCOUNT reports to validate the instance. It generates a detailed verification document that can be used as exit criteria before handing over the instance to development/testing team.

uAssist

YOUR PEOPLESFT UPGRADE TOOLS

PeopleTech, an I.T. solutions provider, offers enterprise solutions, software & application development, staff augmentation, on site/offshore & managed services. A leader in ERP technologies, with wide experience in implementation, support maintenance and upgrade of ERP applications in the areas of PeopleSoft, SAP and Oracle.

uAssist is a collection of tools to assist various tasks in an upgrade project at various stages of upgrade life cycle. It is a Browser based tool developed using PeopleTools. PeopleTech delivers this tool as a compliment to its clients as a part of upgrade project. It focuses on every effort to ensure results, value proposition, quality and performance.

uQuestionnaire - Questionnaire for initial Upgrade Assessment.

uCustomizeIT - Analyzes and automatically upgrades Customizations.

uSQR - Analyzes and automatically upgrades table changes in an SQR.

uSecureIT - Secures key data in newly built PeopleSoft instance before being released to development team.

uValidateIT - Validates PeopleSoft Environments.

uQuestionnaire

Questionnaire to assess an Upgrade project.

Aimed at collecting all information of client's Application Suite to initiate an upgrade project. These questions help to understand customer's PeopleSoft environment. Questions are selected from various business case studies and cover many aspects of an upgrade project already done. This service is delivered by experienced consultants, making it highly efficient.

Categories of Questions

- General - Client Contacts, Project sponsor contacts, Upgrade readiness, Geographical locations etc.
- Administrative - Availability of Hardware, Licenses, Procurement, Infrastructure for onsite-offshore delivery etc.
- Environmental - Application release, Tools release, Type of OS, Database, etc.
- Functional - List of modules, External interfaces, Volume of transactions, Complexity of the customizations etc.

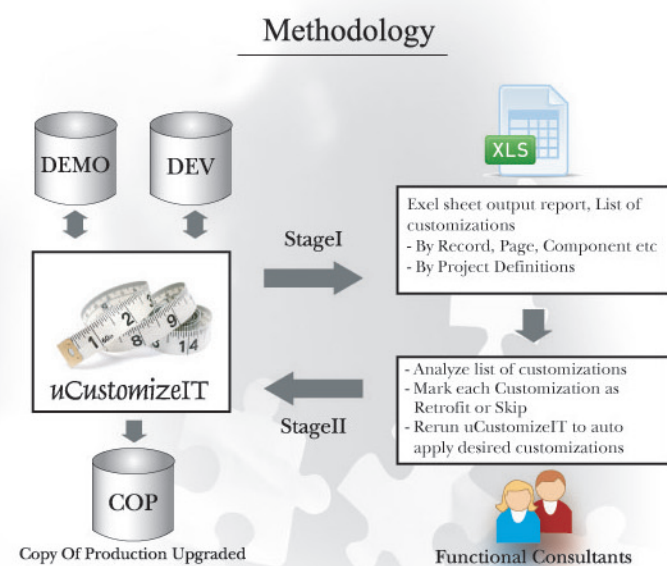

uCustomizeIT

Analyzes and automatically upgrades Customizations.

An automated tool to identify and retrofit documented as well as undocumented customizations for a PeopleSoft environment. There are two stages of executions, in Stage I - the tool identifies the objects with customizations and lists them in an excel report. In Stage II - project team makes decision on each object and provides inputs to auto-apply.

uCustomizeIT provides correct and quick report to initiate fit-gap analysis, helps functional team to decide Go-NoGo on each customization and expedites development activities in targeted environment.

uSecureIT

Secures key data in Development and Test environments.

Almost all major corporations have detected security breaches. **70%** of these corporations detected unauthorized access. **30.2 million Consumers** – were victims of one or more of the frauds covered in the fraud survey by Federal Trade Commission. Vital personal and sensitive data like SSN, account codes, email identifications and bank details are exposed and vulnerable. Data distributed across various phases of software development and testing protects corporations vulnerability through unscrupulous access to key information.

Privacy Compliance Legislations in North America

Sarbanes Oxley

All U.S. public companies and private foreign issuers

Gramm-Leach Bliley (1999)

Banks and financial services companies doing business in U.S.

Canadian – Personal Information Protection and Electronic Documents Act (2001)

All companies doing business in Canada

uSecureIT is a data masking tool built for PeopleSoft applications. It masks the sensitive information in non-production database, thereby making it safe for wider visibility.

- Data security team can set up list of fields to be masked
- Allows multiple techniques of securing the data, based on level of security;
 - Data Encryption – 32 bit highly secured data.
 - Data Replacement – Logically shuffles the data, rule driven.
 - Data Strip off – Strips-off the data.
- Provides realistic data to the developers and testers, maintaining data integrity.
- Data once masked is irreversible.

Methodology
